**Emergency: Review of General Procedures**

Depending on and according to the nature of the diving accident, stabilize the patient, administer 100% oxygen, and initiate the local Emergency Medical System (EMS) for transport to nearest medical facility. Explain the circumstances of the dive incident to the evacuation team, medics and physicians. Do NOT assume that they understand why 100% Oxygen may be required for the local EMS  for transport to nearest medical facility. The local EMS will vary from site to site and it must be stated in dive plan.

1. **Rescue victim and/or position so the proper procedures may be initiated.**
2. **Establish (A)irway, (B)reathing and (C)irculation as required.**
3. **Administer 100% oxygen, if appropriate.**
4. **Activate the local EMS for transport to the nearest appropriate medical facility. The local EMS will vary from site to site and it must be stated in dive plan.**
   - Local EMS Contact Info: ____________________________

5. **Contact if further evaluation or possible evacuation is necessary:**
   - U.S. Coast Guard Rescue Coordination Center  Emergency Only: 1(800) 221-8724 or Ch. 16
   - Divers Alert Network  Diving Emergency number: (919) 684-9111
   - OUT-OF-STATE/COUNTRY: UC Travel Assistance Program 1-866-451-7606 & 202-828-5896 (outside US)
6. **Contact Diving Safety Officer (805 451-5099) and Emergency Contact Person.**
   - If it is not a medical emergency, but there is a concern that a diver may have a decompression illness then:
     - Administer 100% oxygen
     - Contact Diving Safety Officer (DSO) and Emergency Contact Person
     - Contact the Diver’s Alert Network and/or the local chamber as stated in Dive Plan
Diving First Aid

CPR

• Assess the scene
• Check responsiveness: “Are you ok?”
• Alert EMS: Call 911, VHF Channel 16 (Bystander assist)
• Control any severe bleeding with direct pressure

1. AIRWAY: head-tilt, chin lift.

2. BREATHING: quickly look in mouth for airway obstruction give 2 normal breaths until the chest rises clear airway if necessary.

3. COMPRESSION: look, listen, feel (5-10 secs). If the victim is not breathing, begin 30 compressions.

4. AED: Deliver 1 shock as prompted by the AED followed by immediate CPR.

CPR: 30 Compressions / 2 Breaths (about 3 cycles per min)

DIVING ACCIDENT MANAGEMENT

1. Rescue victim and primary assessment
2. Alert local EMS as detailed in dive plan
3. CPR and/or administer First Aid including 100% oxygen
4. Secure victim’s dive computer and scuba equipment
5. Contact Diving Safety Office
6. Submit accident Report

PHONE NUMBERS

UCSB DIVING SAFETY CELL: (805) 451-5099
DAN: Emergency Hotline - (919) 684-9111
Information only (m-f, 9-5) – (919) 684-2948
UC Travel Assistance Program (out-of state/country)
1-866-451-7606 (inside US) / 202-828-5896 (outside US)

OXYGEN ADMINISTRATION

AIRWAY → BREATHING → CIRCULATION

BREATHING DIVER → NON-BREATHING DIVER

Demand Mask → Non-Rebreather Mask (10-15+ lpm O2) → Pocket Mask or Pos. Pressure Ventilate w/O2

FIELD NEURO-EXAM

1. Orientation: name, place and time
2. Eyes: movement, peripheral vision, and pupil size
3. Face: sensation, smile, bite and whistle
4. Hearing: hearing equal on both sides, abnormal sounds
5. Swallow: watch Adam’s Apple
6. Shoulders: shrug resistance
7. Arms and hands: sensation, grip strength, resistance
8. Legs: balance check, leg strength and resistance
